

Not only is it important to select the correct seat, but also to fix it in the chair in the correct position. The adjustable bracket (C) offers a choice of six different positions. The bracket (C) is fitted to all Flemming Chairs as standard.

31

**(4) — SPLIT BACK WITH WINGS.** This has the same benefit as (3), with the additional advantage of wings.

34

**(5) — HIGH BACK WITH FIXED WINGS.** Here the back is shown with the adjustable neck pillow (L).

35

**(O) — BODY SUPPORT** supplied with back strap, adjustable both in width and up and down the back of the chair.

38

**(D) — TOWELLING SEAT COVER** — used in conjunction with incontinence pad.

39

**ARM HEIGHT.** Should arm height need reducing between arm and top of cushion. Two cushion bearer rails are now available. One at 2.5cm and one at 5cm.

Now available separate fully adjustable inflatable lumbar support.

**(1350) STOOL** — can be made to match any of the Flemming chairs and is supplied in the same wood finishes and fabrics.

42

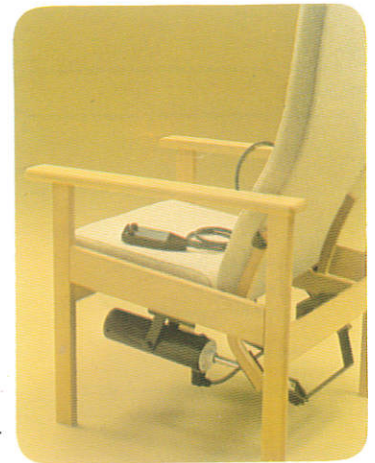

**(A) FIXED BACK POSITION** — slight recline.

**(B) FIXED BACK POSITION** — very upright.

43

**(S) RECLINING BACK** — ELECTRICALLY OPERATED, moves from upright to full recline. Release the light pressure on the control button to stop the back in any position.

44

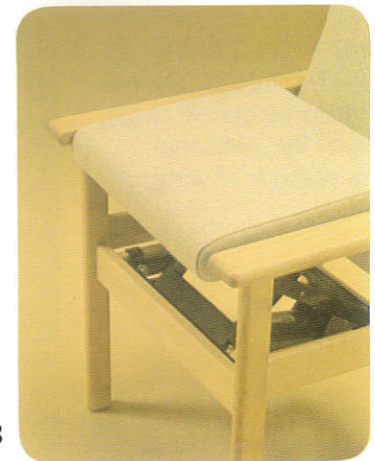

**(V) MANUALLY ADJUSTABLE SEAT RAKE** — easily adjusted to give three different angles to the seat. This fitting can be reversed to produce a forward sloping seat.

47

**(X1) SPRING OPERATED SEAT LIFT** — with this action the seat lift rises vertically keeping the seat almost horizontal.

**(W1)** As above but operated electrically.

48

**(Y) LEG REST MOTORISED** — when the motor is linked to the back **(SY)** the result is a combined rising of the leg-rest and reclining back. Without a motor the same result can be achieved manually **(TY)** by putting slight pressure on the back and pushing with the arms.

51

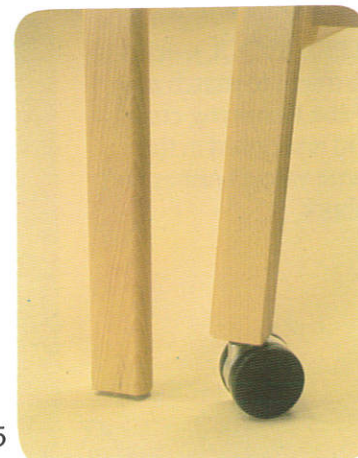

**(Z) FOOT REST** — recommended for wheeled chairs. It is adjustable for height and can be folded away when not in use.

52

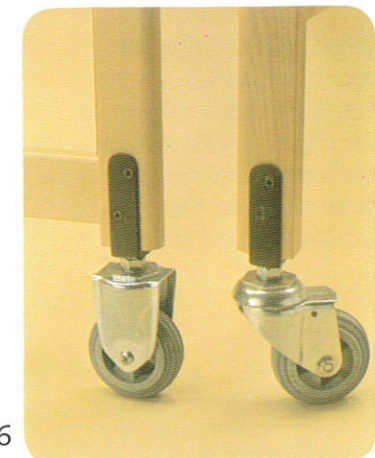

**CASTORS No. 5.** 5cm diameter castors. These can be fitted to the back legs to allow the empty chair to be easily moved for cleaning.

55

**CASTORS No. 8 and 12.** 8cm and 12cm diameter castors. These are normally supplied with fixed castors on the front legs and swivel castors on the back legs. The back swivel castors can be fitted with brakes for safety.

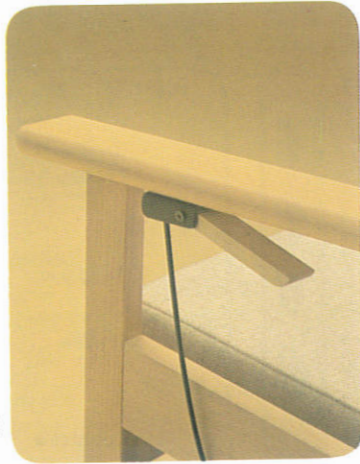

56

**(T) RECLINING BACK — MANUALLY OPERATED.** Release the hand brake which can be located under either arm, light pressure on the back, then adjust to any position from upright to full recline. (No hand brake when TY is fitted).

45

**(U) MANUALLY ADJUSTABLE BACK RAKE —** a simply operated hand ratchet behind the back allows the patient to select any of 4 positions including (A) and (B).

46

**(X2) SPRING OPERATED SEAT LIFT** — with this action, the seat lift rises and inclines.

**(W2)** As above but operated electrically.

49

**(X3) SPRING OPERATED SEAT LIFT** — with this action, the seat lift has little rise and substantial incline.

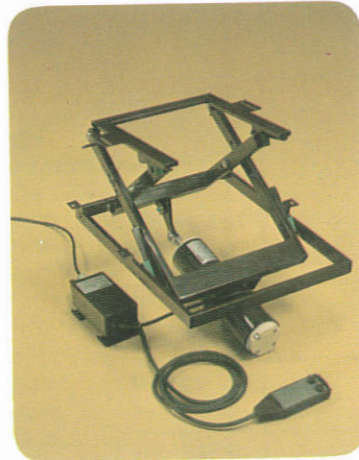

**(W3)** As above but operated electrically.

50

**(W1/2/3) HIGH PRECISION MOTOR CONTROL** for seat action — all mechanical and electrical parts are guaranteed for one year. Easily adjusted to any of 3 positions (see fig. 46, 47, 48).

53

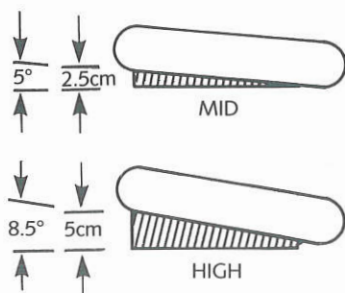

**HAND CONTROL** — there is no electricity in the easy hand control. It works on compressed air and is therefore completely safe. The motor will stop when the button is released.

54

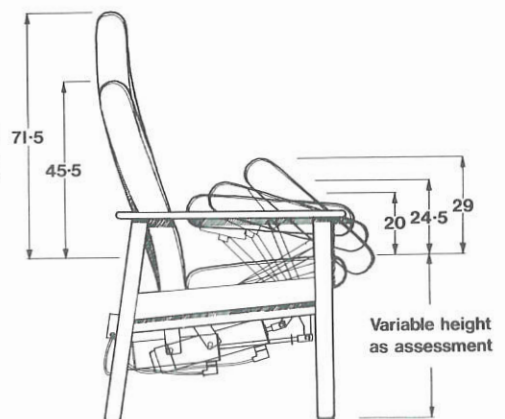

To fix seat angle permanently in the mid or the high slope position there are two wedges available to fit in fix position C bracket.

It is recommended to have the angled fixed seat with reclining mechanisms S.TY.SY.T.

The measurements below the chair seat will be to the user's own assessment. See diagram (in centimetres) showing all measurements above the seat.

No. 12sb 12cm diameter. Swivel with brake

No. 12f 12cm diameter. Non-swivel

### Frame and functions combinations

To check the feasibility and minimum seat height of any frame combined with any function, follow the column across from the required frame to the vertical column under the function needed.

The number at the intersection is the minimum possible seat height — in centimetres. Check all functions needed. The highest number encountered will be the minimum possible seat height for the complete chair.

If the space at the intersection is shaded it indicates that that particular combination is not possible.

\*T can be used only if one arm is removable.

Functions See pages 9-10	Fixed back		Reclining back S motor T MANUAL Adjustable back U	Adjustable seat rake V	Seat lifts W1 motor X2 spring W3 motor X3 spring	Rising leg rest Y motor	Combined back recline and leg rest SY motor TY MANUAL	Adjustable foot rest for wheeled chairs Z

<b>PC1350</b> Stool	27			31				

### Wheels and castors – limitations

To check the feasibility and minimum seat height when specifying the castors or wheels, follow the column across from the proposed wheel or castor to the vertical column under the diagram of the required frame and functions combination. If any function required is not shown, the limitations will be the same as for the frame with no special functions.

The number at the intersection is the minimum possible seat height in centimetres. Check all frame and functions combinations needed. The highest number encountered will be the minimum possible seat height.

If the space at the intersection is shaded, it indicates that that particular wheel or castor cannot be used.

8 and 12cm castors are normally used in sets of 4 to make a chair mobile. If people are to be wheeled in a chair, pushing handles "R" and footrest "Z" should normally be used.

Electrically operated functions would not usually be used in conjunction with these larger wheels and castors.

Frame and functions combinations See page 9	Wheels and castors See page 9	PC131 + A+C + B	PC131 + S or T	PC131 + Y	PC132 + S or T	PC132 + Y	PC133 + PC134	PC134 + Y
		<b>No. 5</b> 5cm swivel. Not for moving occupied chairs		27	42	44	42	44
<b>No. 8s</b> 8cm swivel*		43	43	44	48	48	48	48
<b>No. 8sb</b> 8cm swivel with brake †		47	44 fix b 43, 48	44	48	48	48	48
<b>No. 8f</b> 8cm non-swivel		43	43	44	48	48	48	48
<b>No. 12s</b> 12cm swivel*		47	47	47				
<b>No. 12sb</b> 12cm swivel with brake †		47	47	47				
<b>No. 12f</b> 12cm non-swivel		47	47	47				

\*Swivel castors should not normally be used on all four legs because it makes the chair more difficult to control.

† Castors with a brake should normally be used on the back legs to make the brakes more accessible when pushing the chair.
