IMPORTANT NOTES

The solid woods used in the construction of the Teak Collection are Teak, African Walnut and Afrormosia which are combined with specially manufactured wood-based panels which have been developed for furniture production. These panels are skilfully finished using a selection of Teak, African Walnut and Mahogany veneers. Where alternative wood to Teak is used it is because it offers superior qualities such as consistency of grain, colour and finish.

The beauty of natural wood is that every piece has its own distinct characteristics. Therefore, no two items of furniture will ever look exactly the same. Wood also mellows with age. This means that new items will initially be a different shade from the older ones. However, they will eventually mellow to blend with existing pieces. All measurements quoted are to the nearest 1/4". We reserve the right to alter specifications and prices without notice.

Whilst in this brochure we have made every effort to reproduce accurately the colours of our wood finishes and fabrics, we strongly advise our customers to visit our stockists before making their final choice.
